

Find outputs (Home work)

def square(fun): # fun is num

def inner1():

x = func() # x = num()

return x * x

return inner1

def double(fun): # fun is inner1

def inner2():

y = fun() # y = inner1() → y = 100

return 2 * y

return inner2

① double # num = double(square(num)) → num =
double(inner1) → num = inner2
i.e. Ref num points to inner2 function

② square

def num():

return 10

end of the function.

Print(num()) # print(inner2()) → print(200)

Find outputs (Home work)

def bold(fun): # fun is inner2

def inner1():

return '' + fun() + '' # return '' + inner2() + ''

return inner1

def italic(fun): # fun is inner3

def inner2():

return '<i>' + fun + '</i>'

return inner2

def underline(fun): # fun is f1

def inner3():

return '<u>' + func() + '</u>' # return '<u>
return inner3 + '</u>'.
+ f1()

Q bold # f1 = bold(italic(underline(f1))) →
f1 = bold(italic(inner3)) → f1 = bold(inner2)
→ f1 = inner1 → Ref f1 points

Q italic

Q underline

def f1():

return 'Hello world'

End of the function

print(f1()) # print(inner1)
